FIFO Accumulation System

Increase throughput.

Provides zero-pressure first-in, first-out buffering that protects pressure-sensitive products while maintaining quality, orientation, and sequence.

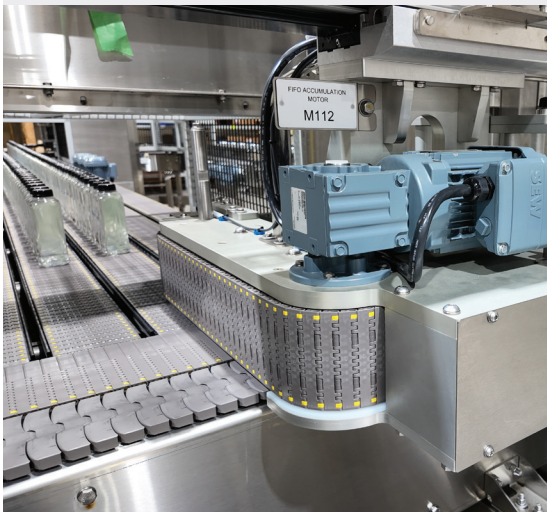

When downstream equipment stops, the system accumulates product—helping upstream equipment continue running and supporting faster, more controlled line recovery.

MAIN FEATURES

- Handles multiple product formats
- Absorbs downstream interruptions (infeed and filling another lane)
- Supports faster line recovery (discharge)
- Servo motor control

PROTECT PRODUCT QUALITY

- Zero-pressure accumulation
- Maintains product orientation
- Preserves First-In, First-Out sequence
- Minimizes product-to-product contact

ADAPT TO PRODUCT VARIETY

- Modular, scalable design
- Accommodates a wide range of product formats
- Configurable for different line layouts and capacities

IMPROVE LINE PERFORMANCE

- Absorbs downstream interuptions
- Helps prevent unnessary upstream stoppages
- Supports controlled production recovery
- Increases line efficiency and throughput
